Practice

Form G

Transforming Polynomial Functions

Determine the cubic function that is obtained from the parent function $y = x^3$ after each sequence of transformations.

- **1.** a reflection in the *x*-axis; a vertical translation 3 units down; and a horizontal translation 2 units right
- **3.** a vertical stretch by a factor of $\frac{1}{3}$; a reflection in the *y*-axis; and a vertical translation 6 units up
- **2.** a vertical stretch by a factor of 4; a reflection in the *x*-axis; and a horizontal translation $\frac{1}{2}$ unit left
- **4.** a vertical stretch by a factor of 3; a reflection in the *x*-axis; a vertical translation 2 units down; and a horizontal translation 2 units left

Find all the real zeros of each function.

5.
$$y = 2(x+1)^3 - 3$$

7.
$$y = -\frac{1}{2}(x+4)^3 - 1$$

9.
$$y = -(x+5)^3 + 1$$

6.
$$y = -3(x-2)^3 + 24$$

8.
$$y = 8(-x-2)^3 + 5$$

10.
$$v = 4(x-6)^3 - 2$$

Find a quartic function with the given x-values as its only real zeros.

11.
$$x = 2$$
 and $x = 8$

12.
$$x = 3$$
 and $x = -1$

13.
$$x = 1$$
 and $x = 3$

14.
$$x = -2$$
 and $x = 6$

15.
$$x = 5$$
 and $x = -2$

16.
$$x = -1$$
 and $x = 2$

17.
$$x = -3$$
 and $x = -5$

18.
$$x = -4$$
 and $x = 4$

- **19. Physics** If you stretch a spring to 5 ft, it has 310 ft-lb of potential energy (*PE*). Potential energy varies directly as the square of the stretched length (*I*). The potential energy can be represented by the formula $PE = \frac{1}{2}kl^2$, where *k* is the spring constant.
 - **a.** What is the value of the spring constant for this spring?
 - **b.** How many ft-lbs of *PE* would an 8 ft length of spring have?

Practice (continued)

Form G

Transforming Polynomial Functions

Determine whether each function can be obtained from the parent function $y = x^n$, using basic transformations. If so, describe the sequence of transformations.

20.
$$y = 2(x-3)^3 + 4$$

21.
$$y = x^4 + x - 3$$

22.
$$y = -\frac{1}{3}x^2$$

23.
$$y = (-x + 5)^3$$

24.
$$y = \frac{2}{r^3}$$

25.
$$y = 4(x)^4 - 12$$

- **26.** Graph the parent function $y = x^3$ after it has been transformed by the following changes.
 - vertical stretch by a factor of $2\frac{1}{4}$
 - reflection across the x-axis
 - vertical translation 4 units up
- **27. Error Analysis** Your friend set up a problem to find a quartic function with the only real zeros of x = -4 and x = 1. She wrote down $y = (x + 4)(x 1)(x^2 1)$. Will she get a correct quartic function? Why or why not?
- **28. Open-Ended** Transform the parent function $y = x^3$ by vertical stretch, reflection across the *x*-axis, horizontal translation, and vertical translation.
- **29**. You are swinging a bucket in a circle at a velocity of 7.8 ft/s. The radius of the circle you are making is 1.25 ft. The acceleration is equal to one over the radius multiplied by the velocity squared.
 - **a.** What is the acceleration of the bucket?
 - **b.** What is the velocity if the acceleration is 25 ft/sec²?
